

Cisco Systems

Herndon, VA

Contract Date: May, 1998

Project Completion: April, 1999

Client: Cisco Systems
San Jose, CA

Synopsis: Cisco operates with the understanding that foodservice is an important aspect of their corporate culture. In building out the interiors of this building near Dulles International Airport, they planned for a cafeteria with window views for the seating area. W&A was challenged with the design of the functional aspects of the 3908 sq. ft. for kitchen and service adjacent the dining area.

The shape and size of the servery and kitchen necessitated creative solutions for functional flow. The final design includes a variety of stations within the servery, including all of the cooking. The kitchen is comprised of storage, preparation, and catering support. Cisco's extensive free beverage program uses an additional allotment of storage; and creates a beverage area beyond the cashier point.

The kitchen is situated with easy access to the conference room on the same level for catering, without entering the servery. A coffee bar was created in the lobby area to be open independently or with the servery, with server access to the support areas. This special P.O.S. location also supplements main cashiers at peak times.

The equipment budget came to \$470,000, including custom millwork cabinetry with solid surface counters. The 800 employees have access to large vending area which remains open 24 hours a day.

Scope of Responsibility: Preliminary and conceptual plans; cost estimating; CAD Design Development and Construction documents including dimensioned rough-ins and special architectural conditions; proprietary specifications, and installation coordination.
